

RAINWATER HARVESTING AND GREYWATER RECYCLING

BPEC (RWH)

Course Overview:

This BPEC accredited course will enable you to gain all the underpinning skills and knowledge required to install Rainwater Harvesting and Greywater Recycling (Water Reuse) systems, including domestic and commercial applications; and how you can reduce water consumption through the use of these two technologies.

Who Is This Course For:

The course is aimed at existing plumbers, builders and ground works engineers who require a better understanding of the design, installation and maintenance of these systems.

Key Learning Areas Covered in This Course:

- Rainwater and greywater harvesting overview
- Legislation surrounding these technologies
- Health and safety, installation and commissioning
- Rainwater harvesting calculations and sizing
- Systems and components
- Water quality standards and their categories
- Installation, commissioning procedures, maintenance and fault finding.
- Resources, external bodies and the code for sustainable homes
- Direct and indirect rainwater and greywater harvesting systems
- Specification of appropriate rainwater and greywater harvesting systems

Course Duration / Fees / Location:

3 day training course. Available in Halifax. Accommodation from £98+VAT (including DBB)
